# Presents for kids and grinches

Tara the elf wants to bring presents to kids in a house. There are grinches or presents in each cell on the way. Tara collects all the presents along the path she follows. When she passes a cell with grinches, she must give one present to each grinch. If she does not have any presents at that time, she will give them to the grinches later when she gets more presents.

Tara can just move up or move to the right in the following map:

QUESTION
