

Disco tickets

It is Monday. The tickets for the school's Valentine's Day disco have just gone on sale. The diagram below shows the students in a class and the lines show who is friends with whom. The ticket symbols show who bought a ticket on Monday.

Each day after that, if a student does not have a ticket, they count how many of their friends already have one. If at least half of their friends had a ticket on a previous day, they will buy a ticket on that day. Otherwise, they choose not to buy a ticket on that day.

QUESTION

On what day will the last friend buy their ticket?

- A. Tuesday
- B. Wednesday
- C. Thursday
- D. Friday
